

Planning ahead for calving

Target:

<10%

Intervention

- Assisted Calvings
- Calves treated for Scour or navel/joint infections
- Supplementary Colostrum

**Review of
2020**

With health and hygiene in mind, calving preparation should involve a review of 2020 performance. Consider assisted calvings, number of calves treated for navel/ joint infections, scour or respiratory disease and number of calves that required colostrum supplementation.
